Name	:	Priya Chaurasiya	Age	:	20 Yrs
Lab No.	:	RPT-1789129959651	Gender	:	FEMALE
A/c Status	:	ACTIVE	Ref By	:	-
Collected	:	-	Report Status	:	COMPLETED
Received	:	-			
Reported	:	Sep 11, 2026, 6:02 PM			

Test Name	Result	Units	Bio. Ref. Interval	Status
Complete Blood Count				
Hematology				
Haemoglobin	67	g/L	120 - 155	LOW
Erythrocyte Count	4	$\times 10^{12}/L$	4.1 - 5.1	LOW
Leukocyte Count	4	$\times 10^9/L$	4 - 11	NORMAL
Platelet Count	333	$\times 10^9/L$	150 - 450	NORMAL
Mean Corpuscular Volume	90	fL	80 - 100	NORMAL

AI-Assisted Health Information

AI-Assisted Health Information — This information is generated from laboratory results for informational purposes only and is not a medical diagnosis.

Abnormal Findings

Haemoglobin: 67 g/L

Reference Range: 120-155

Status: **LOW**

Haemoglobin is markedly low, which means the blood is carrying much less oxygen than normal. This is severe anemia and needs prompt medical attention.

Erythrocyte Count: $4 \times 10^{12}/L$

Reference Range: 4.1-5.1

Status: **LOW**

Slightly fewer red blood cells than normal, consistent with anemia.

Normal Findings

Leukocyte Count: $4 \times 10^9/L$

Reference Range: 4-11

Status: **NORMAL**

Platelet Count: $333 \times 10^9/L$

Reference Range: 150-450

Status: **NORMAL**

Mean Corpuscular Volume: 90 fL

Reference Range: 80-100

Status: **NORMAL**

Possible Health Concerns / Symptoms

- Severe anemia, which can cause fatigue, weakness, dizziness, shortness of breath, pale skin, and rapid heartbeat
- Possible causes include blood loss (for example heavy menstrual periods), nutritional deficiency, or other underlying conditions; the normal red cell size (MCV) suggests further testing is needed to identify the cause

Recommended Next Steps

- See a doctor promptly, as this level of anemia requires urgent evaluation and treatment
- Follow-up tests may include iron studies, vitamin B12 and folate levels, reticulocyte count, and stool or gynecologic evaluation for blood loss
- Do not start iron or other supplements without medical advice
- Avoid strenuous activity until reviewed by a doctor, and rise slowly to prevent dizziness
- Eat an iron-rich diet (such as lean meat, beans, and leafy greens) as part of overall care, but this alone will not correct anemia this severe

When to Consult a Doctor

- Seek care urgently or go to an emergency department if you have chest pain, fainting, severe shortness of breath, a very fast heartbeat, or confusion
- See a doctor as soon as possible for the abnormal results themselves, even if symptoms are mild
- Contact a doctor if you experience worsening fatigue, dizziness, palpitations, unusually heavy menstrual bleeding, or blood in stool or urine
